TITLE : INTEGRATION OF QUENCHING BOX  
AND LIGHTER

ABSTRACT : PROBLEM TO BE SOLVED: To provide the subject integrated object excellent in quenching and simple in the form and free from troublesomeness in carrying.

SOLUTION: This object is obtained by combining a tubular space having a tilted orifice 5 with a lighter 1, as shown in the figure, where the housing 2 of the lighter 1 and the quenching box 4 are molded in one body and the orifice 5 of the quenching box 4 is tilted at angle 6°. In another case, the quenching box is molded in one body with lighter-storing space where the housing 2 of a lighter is fitted in the storage space or another object in which a pipe shaped box has a holding member and the lighter housing is mounted by this member.

Abstract :

FR2386992 A

The pocket conservator (10) gives simple, rapid and dry extinction of a cigarette or cigar, enabling it to be used again.

It comprises a tube open at one end, with a device preventing the cigar etc. from coming out, and slightly longer than a conventional one.

It can be tapered at the closed end down to a diameter slightly less than that of the cigar, and there can be a double elastic tongue securing the cigar in place and acting as a hook. It can form part of a plastics cigarette lighter.
